Release 0.0.1a1

Paulo R

Feb 01, 2018

Contents

1 Meeting	3
1.1 Usage	3
1.2 Documentation	3
1.3 Thanks to	3
Python Module Index	7

Warning: Beta software You are using a software that has not reached a stable version yet. Please beware that interfaces might change, APIs might disappear and general breakage can occur before *1.0*.

If you plan to use this software for something important, please read the roadmap, and the issue tracker in Github. If you are unsure about the future of this project, please talk to the developers, or (better yet) get involved with the development of python-boilerplate!

1.1 Usage

Festival management application: Tickets E-Commerce, Tickets validation on Lobby (Web, Paper, Guest, Local Purchase) and Sells on Wristband/Card (Beverage, Food, Souvenir, etc).

1.2 Documentation

The documentation is written in rst format. It's available on the folder *docs/*. To write or read it in realtime install the sphinx dependencies using:

```
$ python -m pip install docs/requirements.txt
```

And then execute the docs server via the command below:

```
$ make docs
```

Your browser will open the local docs website (Running on port 8000 by default).

1.3 Thanks to

Project structure, documentation generation and other stuff from these python boilerplate package projects:

- <https://github.com/fabioimmendes/python-boilerplate>
- <https://github.com/mtchavez/python-package-boilerplate>

1.3.1 Topics

Installation instructions

meeting can be installed using pip:

```
$ python -m pip install meeting
```

This command will fetch the archive and its dependencies from the internet and install them.

If you’ve downloaded the tarball, unpack it, and execute:

```
$ python setup.py install --user
```

You might prefer to install it as system-wide. In this case, skip the `--user` option and execute as superuser by prepending the command with `sudo`.

Troubleshoot

Windows users may find that these command will only works if typed from Python’s installation directory.

Some Linux distributions (e.g. Ubuntu) install Python without installing pip. Please install it before. If you don’t have root privileges, download the `get-pip.py` script at <https://bootstrap.pypa.io/get-pip.py> and execute it as `python get-pip.py --user`.

API Reference

API documentation for the `python-boilerplate` module. Something here

```
class meeting.common.models.NamedBaseModel(*args, **kwargs)
    Named Something
```

Parameters

- **created_on** (*DateTimeField*) – Criado em
- **modified_on** (*DateTimeField*) – Modificado em
- **name** (*CharField*) – Nome
